Overview Files

All packages can be downloaded from our website http://www.design-joomla.eu/downloads.html
A complete list of availabe install packages:

1. DJ-Menu module

Installation

Navigate *Extensions → Install/Uninstall*, choose the package and press *Upload File & Install*.

Now the module is displayed on Module Manager. Let's take a look at module configuration.

DJ-Menu – configuration

DJ-Menu is a suckerfish menu with animated mootools effects. Now, you can easily manage whether the menu is animated or just scriptless css drop-down.

Navigate *Extensions → Module Manager* and choose DJ-Menu module.

Let's take a look at *Module Parameters*:

Short description:

Menu name – choose the name of menu (default is mainmenu)

Navigate to *Menus → Menu Manager*

Include default css – if you want to change menu CSS styling, change this parameter to 'No' and copy djmenu.css and djmenu_fx.css files from /modules/mod_djmenu/assets/css/ into /templates/[your_template]/css/. Then you may change font sizes, colors, backgrounds, etc. of DJ-Menu elements. The only difference between djmenu.css and djmenu_fx.css is replacement of all occurences of 'li:hover' (djmenu.css) with 'li.hover' (djmenu_fx.css)

Enable Effects - if Yes, submenus will be showing and hiding with nice mootools effects. Requirements: Joomla! 1.5.19+ , enabled 'System - Mootools Upgrade' plugin (available since Joomla! 1.5.19 as core plugin)

Wrapper id - submenu will change direction if it goes out the container with wrapper id. Default wrapper is container with .dj-main class

Vertical transition at first level - enable vertical transition of submenu at first level. You can mix vertical, horizontal and fade transition as you want.

Horizontal transition at first level - enable horizontal transition of submenu at first level. You can mix vertical, horizontal and fade transition as you want

Fade effect at first level - enable fade transition of submenu at first level. You can mix vertical, horizontal and fade transition as you want

Vertical transition at other levels - enable vertical transition of submenu at second and further levels. You can mix vertical, horizontal and fade transition as you want.

Horizontal transition at other levels - enable horizontal transition of submenu at second and further levels. You can mix vertical, horizontal and fade transition as you want

Fade effect at other levels - enable fade transition of submenu at second and further levels. You can mix vertical, horizontal and fade transition as you want

Tansition effect – choose the transition effect type

Effect duation - set effect duration time in miliseconds (1000 ms = 1 second)

Delay time before close submenu - set delay time in miliseconds (1000 ms = 1 second)
